

CONDUIT CONNECTOR - INSTALLATION INSTRUCTIONS

For Installations where conduit pipe is used

Notice: Be sure that the power has been turned off at the fuse box before installing any track or fitting.

1. Remove the cover from the conduit connector by unscrewing the philips head screws.
2. Loosen the track set screw located on the tip of the live end. Insert the connector into the track and tighten set screw.
3. Make electrical connectors connect black wire from the conduit pipe to the screw terminal marked "+". Connect the white wire from the pipe to the screw terminal marked "-". Connect the grounding conductor from the conduit pipe to the center or remaining terminal.
4. Locate the track and mark the location of the attachment holes. Use fasteners suitable for the materials to which the track will be attached. Toggle bolts have been supplied and required A 5/8" hole.
5. Replace cover on the conduit connector and secure.
6. Attach track lighting heads and turn power on.
