STRIP LIGHTING

FLEXIBLE. PRACTICAL. BEAUTIFUL.

STRIP LIGHTING IS AN EFFICIENT AND VERSATILE TECHNOLOGY THAT LETS YOU CUSTOMIZE THE SPACE AROUND YOU BY ADDING LIGHT ALMOST ANYWHERE.

Brighten the ceiling from the cove without worrying about changing bulbs or enduring the dim flicker of a dying tube.

Add soft light to display shelves, in drawers and cabinets, behind mirrors, under steps... anywhere light is needed.

Accent a room's decor or set the mood on a backyard deck. There's no end to the possibilities, and with the right strip lights, practically anything can be achieved.

Light is no longer limited by lamps and sockets. You can be in control.

LIGHT COLORS EVERYTHING YOU SEE. IT AFFECTS EMOTIONS. IT CAN SOOTHE OR EXCITE.

A WELL-PLACED LIGHT CAN PREVENT A LOT OF HEADACHES. LITERALLY.

A NEW FACE

When applying makeup, experts recommend using light that matches the social environment. Color changes with setting and time of day. Color balancing strip lights can ensure there are no surprises on the red carpet.

LIGHT WHERE YOU NEED IT

A growing trend in custom home design is to add short runs of strip light and switches or sensors to light up dark drawers automatically.

OUT OF SIGHT

Hidden light sources can set a mood, establish a design aesthetic, or subtly direct attention where it's needed.

FACE THE ELEMENTS

Use outdoor rated strips or extrusions to illuminate pathways and entrances improving safety while enhancing the view. Quality outdoor materials resist yellowing from UV exposure.

DESIGNING YOUR STRIP LIGHTS

TO DECIDE WHAT MATERIALS YOU NEED FOR YOUR PROJECT, WE NEED TO ASK THREE QUESTIONS.

1. WHERE WILL THEY BE?

LED strip lights need protection. How much depends on where they are.
An IP rating is a code that tells how much protection an enclosure offers.

The first number is defense against objects like dust and fingers.
The second digit is defense against moisture.

Most indoor installations require minimal object protection and no moisture protection - eg. IP20. Sometimes no protection is needed.
Outdoor enclosures generally need at least level 6 solid protection and liquid protection between 5 and 8 - eg. IP65 or IP68.

(See p. 34 for help deciding how to mount and protect your strip lights)

3. HOW LONG IS EACH SECTION?

Measure the length that each line of light should cover.
Add the lengths of all the strips to be controlled by one switch or button. That's how many feet of strip you'll need.
From this you can calculate how much power the area will need.

(See p. 29 for help deciding what power supplies will work best)

2. WHY ARE THEY THERE?

Some lights are meant to be seen.
For these, color is most important.
Density just has to be enough to avoid gaps or dark spots.

Some lights are meant to see by.
For these, color temperature and color rendering are important for accurate colors and appropriate mood.
Density depends on how bright the light needs to be.

OUTDOOR

BATH

INDOOR

OVERHEAD

HD 4.4W, SSL 4.4W

OUTDOOR BATH/WET INDOOR

General-purpose down lighting used to illuminate a space without the need for a traditional bulb + fixture combination.

WW, NW, CCT WW, NW, CCT WW, NW, CCT

AMBIENT

SD 2.2W, HD 4.4W

Indirect lighting that creates an additional layer of light to fill out a space and help an area feel more open and spacious.

WW, CCT, RGB, RGBW WW, NW, CCT WW, CCT, RGB, RGBCCT

DECORATIVE

HD 4.4W, SSL 4.4W

Drawing with light to outline a space, design feature, or an entire building as a purely aesthetic element to enjoy.

RGB, RGBW, RGBCCT WW, NW WW, NW, RGB, RGBCCT

TASK

HD 4.4W, SSL 4.4W

Bright, even lighting that fully washes a space to help you see clearly as you work, study, or perform a task.

WW, NW, CW, CCT WW, NW, CCT NW, CW, CCT

ACCENT

SD 2.2W

Splashes of light that may highlight features, elevations, or dynamic elements deserving of special attention. May be used to warn of hazards, illuminate walk ways, or wash artwork.

WW, RGB WW, NW, CCT, RGB WW, NW, CCT, RGB

LIGHT CHANGES THE WAY WE THINK.

LIGHT IN THE EVENING IS WARM WHITE
THIS AMBIENCE ENCOURAGES US TO REST

EVEN WARMER IS THE LIGHT OF A CANDLE
OR A TRADITIONAL INCANDESCENT BULB

THE LOWER LIGHT LEVELS WE ASSOCIATE
WITH WARM WHITE MAKES DIM-TO-WARM
LIGHTING ESPECIALLY COMFORTING

NATURAL WHITE LIGHT IS NEUTRAL
IT REVEALS COLORS MOST ACCURATELY

THIS LIGHT IS OFTEN PREFERRED FOR CLOSETS
MUSEUMS AND STORES WHERE COLOR IS KEY

DECORATIVE STRIP LIGHTING
CAN CREATE LINES OF
LIGHT THAT HIGHLIGHT
ARCHITECTURAL DETAILS AND
DEFINE PHYSICAL SPACES

Deeper extrusions can reduce beam angle
and contain light falloff.

Gaps appear when density is low
and extrusion depth is shallow.

Deeper extrusions will minimize
gaps but reduce brightness.

Higher density will minimize gaps
while maintaining brightness.

BUILDING A STRIP LIGHT SYSTEM

THERE ARE SIX TYPES OF PARTS NEEDED FOR ANY STRIP LIGHT INSTALLATION. ONLY TWO ARE ALWAYS NECESSARY.

STRIP LIGHT

Pick your color.
Pick your density.
Measure each run.

EXTRUSION

Does the strip need protection?
Does it need mounting support?
Will the installation be visible?

DIFFUSER

Does the strip need protection?
How do you want it to look?
Are you creating a line of light?

POWER SUPPLY

How many sections will need their own power?
How much power will each section require?
Will the power supply get wet?

CONTROL

Wireless or wired?
How many zones need to be controlled separately?
Full color, color balancing, dimming, or just on and off?

CONNECTORS

Sketch your system.
Count all the connection points.
Measure the distance between connection.

QUALITY MATTERS

WHEN CHOOSING A STRIP LIGHT YOU CAN RELY UPON FOR YEARS OF BRIGHT AND CONSISTENT PERFORMANCE LOOK TO A RELIABLE SOURCE

ALL STRIPS BACKED BY 5 YEAR WARRANTY

Our knowledgeable staff will work with you to ensure that you have the right materials for your project so it will perform beyond your expectations for years to come.

Whether you're an electrician or DIY-ing it, they have the information you need to make your next project go smoothly.

CUTTABLE AT MARKED LENGTHS

The amount of light a strip produces depends on how many diodes are packed into each linear foot.

Diodes are wired in groups of three (12V) or groups of six (24V), with marks to indicate where the strip can be cut.

Each section can be put to use, so there is no wasted strip.

CONNECTORS CUSTOM DESIGNED FOR EACH STRIP

Faulty connections are the most common reason an LED installation may fail. Soldering may not be appropriate for all spaces or levels of expertise.

The right connector can prevent hours of troubleshooting or maintenance. Making connections that last can be a snap.

ADHESIVE BACKING BY 3M

Plan out your project. Experienced installers cut all their segments to length, make and test their connections prior to final mounting.

Painter's tape can hold strip in place temporarily during the process. Once you're ready to attach your strip to a clean, smooth surface, it's just a matter of peel-and-stick.

EXTRUSIONS DESIGNED FOR ANY APPLICATION

Aluminum extrusions that fit your strip give any project a professional finish and can extend its life.

Extrusions allow strips to be attached to rough or uneven surfaces, or to be used where weather or even physical impact is a concern. Clear silicone is frequently used for added protection.

Our strips score **90+** on the Color Rendering Index (CRI). They offer the fullest range of visible light for true color accuracy. Each 3040 LED casts **24-26 lumens** and maintains a color consistency between production batches. No color or brightness anomalies here. They feature premium thickness (**3oz**) copper for enhanced heat dissipation, which leads to longer life.

Our strips are **Certified ETL** - they meet or exceed professional standards.

NUR strip lights may be safely installed by mounting directly to a flat surface or by use of an aluminum extrusion (section starts on page 23). An aluminum extrusion will not short out the strip. To attach directly, peel off the protective backing film to expose the 3M adhesive layer on the strip.

THE SMD 3040/5050
LED STRIP
LIGHT SERIES
CRAFTED BY **NUR**

Strips of different densities may be safely operated in series or parallel on the same power supply. Strips may be cut along the marks occurring after every three diodes. IP68 strips may be safely installed in wet conditions or outdoors.

IP20 strips may be safely installed in wet conditions or outdoors ONLY when sealed with silicone in an appropriate aluminum extrusion.

All strips in this series are dimmable by a low volt controller or a dimmable power supply.

Strips require 12V input. 24V options are also available.

SKU Builder: STP-3040_density_length_color_IP rating eg. STP-3040-SD-10FT-3500K-IP68

24 = 24VDC ONLY

12V vs 24V STRIP

24 Volt strip uses the same amount of energy per foot and produces the same amount of light per foot as its 12Volt counterpart. By using double the amount of low voltage, it experiences half as much voltage drop, yielding longer runs per power supply and requiring fewer amplifiers to power extra long runs.

12V strip may be safely cut at cut marks occurring after every three diodes.
24V strip may be safely cut at cut marks occurring after every six diodes.

100FT length reels available for 3000°K or 4000°K (Indoor 24V only)

SEAMLESS STRIP LIGHT

No hotspots. No gaps. Just a pure seamless line of bright light, thanks to a densely packed series of incredibly small chip-on-board diodes.

With a CRI (color rendering index) of 90 and over 370 lumens per linear foot, this strip is perfect for providing bright illumination while making a bold statement.

SSL Strip Cutting Increments

STRIP CONNECTORS

For most types of strip lighting there is a wide variety of connectors to use, as an alternative to soldering, to make installation either indoors (ID) or outside (OD) easy and enduring.

Couplers and L-clips connect 2 strips.
T-clips connect 3 strips. X-clips connect 4 strips.

All strip connectors have a 5A, 60W limit for 12VDC
- or a 5A, 120W limit for 24VDC.

Separate silicone protection is needed for outdoor installations.

Couplers directly join the ends of two strips.
This is known as an end-to-end splice.

Indoor connectors clamp on to the end of a strip and clip into place. They do not offer protection from moisture.

Outdoor connectors bite into the protective jacket at the end of a strip and press the seal closed.

Extension connectors add the flexibility to round corners and pass obstructions between strip sections.

Bare connectors simplify wiring strips to wires or other components.
This is called a pigtail.

The number of pins in a connector corresponds directly to the number of contacts on the strip for which it is designed.

WALL-MOUNTED RF CONTROLLERS

DIAL-DRIVEN AND TOUCH-SENSITIVE ARE ALL PROTECTED BY CRYSTAL CLEAR, DURABLE STALINITE GLASS

ALL MOUNT DIRECTLY INTO A STANDARD SINGLE-GANG JUNCTION BOX

DIAL-DRIVEN CONTROLLERS ARE FULLY WIRELESS, POWERED BY A TYPICAL COIN BATTERY (CR2032)

TOUCH-SENSITIVE CONTROLLER IS POWERED BY A LOW-VOLTAGE FEED (12-24 VDC)

SINGLE COLOR

0.1% ~ 100% dimming range

Spin the dial to control light intensity

Click to switch on or off

COLOR BALANCE

Spin the dial to choose color temperature between warm and cool white

Double-click for brightness control, and again for color balance control

Click to switch on or off

RGB

Spin the dial to select a color

Double-click to switch to brightness control
Double-click again to go back to RGB control

Click to switch on or off

RGBW

Quick corner hotspots for instant red, green, blue or white light

Touch wheel mixing of over 16 million colors

White light separately tuneable from warm to cool

Set 3 custom colors for instant access

HANDHELD RF CONTROLLERS

SIMPLE AND DIRECT CONTROL OF RGB STRIP LIGHTS IS IN YOUR HAND

EACH DEDICATED REMOTE IS NOT MUCH BIGGER THAN A CREDIT CARD

EACH REMOTE IS POWERED BY A STANDARD COIN BATTERY

44-KEY RGB

12-24VDC input
240W output capability

Save up to 6 DIY custom color presets or use one of 20 predefined colors

6 modes with customizable speed settings

AUDIO DRIVEN

12-24VDC input
140W output capability

Adjustable sound level sensitivity

Input via built-in microphone or auxiliary audio-in jack

9 static modes
3 dynamic modes
3 music modes

Let the music take control.

20-KEY RGB

12-24VDC input
240W output capability

6 modes with customizable speed settings

LOW VOLTAGE RF RECEIVER

12-36 VDC input
240-720W output

4 channel output
5 Amp per channel max output

Universal output can control single color, color balance, RGB, and RGB CB lights.

Each receiver can be paired with up to 8 different remotes at one time.

Built-in Learning Key makes pairing quick and easy.

Outdoor rated version (IP67) available by special order.

Rated for indoor use only (IP20).

Rated for indoor use only (IP20).

Compatible with any wall-mounted remote shown on page 38.

Amplifiers can eliminate voltage drop that results in flickering or dimmed output toward the end of a run.

One amplifier after each 100 Watts of light load can boost the signal from a single controller to another 100 Watts' worth of lights.

4 Amp max output load per channel

12-24 VDC input
3 channel output

12-24 VDC input
4 channel output

LOW VOLTAGE AMPLIFIER

Rated for indoor use only (IP20).

See compatible fixtures in the WiFi section starting on page 66.

Fits anywhere
Half an inch thick
Weighs just over an ounce

Powered by a standard mini-USB connection
Heat and cold resistant polycarbonate casing

2.4GHz WiFi connection to your local network

WIFI CONTROLLER BRIDGE

The ORA Box2 bridges communications from anywhere in the world. It connects to a dedicated ORA iOS or Android app via your existing wireless network, and rebroadcasts commands via an RF signal to your lights.

With the WiFi bridge, your phone is the remote.

Rated for indoor use only (IP20).

MUSIC-DRIVEN CONTROLLERS

LET THE RHYTHM MOVE YOU

Control lights via audio with an ORA remote or through the ORA or TUYA apps for iOS and Android.

Each controller contains a built-in signal repeater that relays commands it receives up to 98' away, making it possible to cover tremendous distances with no additional equipment.

RGB, RGBW, RGBCCT

Download the Smart App

ORA

TUYA

Controllers can transmit via WiFi, Bluetooth, or 2.4G to control dimming, scene and group control, music and rhythm control, sleep/wake timers, device linking and other automation.

SPI DIGITAL CONTROLLERS

Serial Peripheral Interface controllers work with digital strip lighting to create complex effects, including chasing.

Use an app on your phone via Bluetooth to directly control digital LED strips or panels or to set up audio-driven input.

DIRECT CONTROL

AUDIO DRIVEN

DMX DECODERS

Digital Multiplex Signal decoders translate communications from a DMX master console into signals that directly control individual lights or fixtures.

3- 4- or 5-channel output
DMX512 signal I/O
3-pin M&F XLR terminal
2x RJ45 ports
Digital display to directly show, set and confirm DMX addresses

12-24VDC input
8A / channel output supports 5x 96-192W
Constant voltage

Output PWM frequency 500Hz ~ 30KHz
Output dimming curve γ value 0.1 ~ 9.9

BLUETOOTH CONTROLLERS

SENSOR READY FIXTURE CONTROLLER

Smart phone app control of
wired luminaires
0-10V Single/Dual output
3A relay control

LINE VOLTAGE SCENE CONTROLLER

Ideal retrofit solution
4-scene control
Up to 100 foot transmit range

5-KEY BATTERY POWERED REMOTE SWITCH

CR2032 battery can last over 3 years.
3-scene control
Up to 100 foot transmit range

LOW VOLTAGE DAY HARVEST / PIR SENSOR

12VDC input
Up to 50 foot sensor range
IP66 waterproof
Up to 200 foot transmit range
Available mounting recess adapter

DAYLIGHT HARVEST / PIR SENSOR

Up to 40 foot sensor range
without false triggers
4-pin design for color-tuning
IP66 waterproof
Up to 200 foot transmit range

WIRELESS 0~10V CONTROLLERS

0~10V DIMMING POWER PACK

Receives RF input from up to 5 sensors up to 100ft away

Sets dimming levels for up to 1500W of lights

DAYLIGHT HARVEST SENSOR

0 ~ 1000 Lux sensitivity range
Custom calibration capable
Wireless for easy positioning

WIRELESS PIR SENSOR

120° field of view
12 ~ 60 foot range
Adjustable sensitivity
Adjustable dimming
Adjustable timeout

WIRED 0~10V DIMMER

Pulse width modulation dimmer

Push on/off
Adjustable dimming
12 ~ 24VDC input
12 ~ 24VDC output
48W @ 12VDC load
96W @ 24VDC load

TIMERS OR SINGLE DIMMERS DON'T RESPOND TO CHANGING CONDITIONS

Most automated lighting systems rely on timers that are non-responsive. They use the same amount of energy and cast the same amount of light no matter what other light is affecting the area.

When it rains, when there are clouds, when the sun is low - light levels can be too dark. When the sun is at its strongest, the combination can create intense glare that is way too bright.

Daylight Harvesting uses the free available light from windows and skylights, and adds just enough light to keep rooms at the brightness you want - not too dim, not too bright. Just right.

WIRELESS WALL MOUNT CONTROL DIMMER

Slim form mounts behind a standard fashion-style switchplate.

Wireless RF control means it can be mounted anywhere with no need for special junction boxes or wiring.

DAYLIGHT HARVESTING SENSORS AND DIMMING POWER PACKS BALANCE EFFECTIVE LIGHT AND SAVE ENERGY

CABINET SWITCHES

CONTROL IN-CABINET LIGHTING AUTOMATICALLY
TURNS LIGHT ON WHEN DOOR IS OPENED...
TURNS LIGHT OFF WHEN DOOR IS CLOSED

ENHANCE ANY INDOOR ENVIRONMENT

SLIM LINE SURFACE MOUNT

3000°K, 4000°K, and 5000°K switchable

Slim Mini Panel Lights are just a half inch thin.

They mount directly over traditional junction boxes.

*Fully sealed, they are rated for damp environments such as kitchens and bathrooms.
Each runs on standard 120 VAC power.*

Choose between warm, natural or cool white with the flip of a switch.

Customize their look with Chrome or Black trim that magnetically snaps to cover the standard white bezel.

120 = 120VAC ONLY
TRIAC
Dimmable
3CCT

SLIM LINE SERIES

Available in 3000°K, 4000°K, and 6000°K

*Barely as thick as the drywall that supports them,
they illuminate locations that standard cans just won't fit.*

*Both the Slim Line Round and Slim Line Square series
are available in 4" (6W), 6" (12W), 8" (15W) and 10" (18W) sizes.*

*All are just a half inch thick, fully sealed
and rated for damp environments.*

*Uses 12V DC current, comes with its own pluggable
connector and features spring clips for simple installation.*

Requires a low-voltage DC feed - does not use AC power.

12 = 12VDC ONLY
120 = 120VAC ONLY

ULTRA SLIM ROUND PANEL LIGHT

Integrated J-box
100-120VAC input

Available in 3" (451-512 lm)
or 4" (562-644 lm)
or 6" (936-1041 lm)

Color temperature selectable:
2700°K / 3000°K / 3500°K /

ORA GARDEN LIGHTS

Every light in this series comes with a built-in control relay that not only responds to commands from an ORA remote or smartphone app, it repeats that signal to other lights up to 100' away and synchronizes with their response. Full RGB-mixed color and white temperatures adjustable between 2700°K and 6500°K in a rugged all-weather housing give full control of the colors in any outdoor environment.

25° beam angles
30'+ illumination range

AVAILABLE FOR 24VDC IN 9W
AVAILABLE FOR 120VAC IN 6W, 9W, 15W,
50W, AND 100W

AVAILABLE FOR 120VAC
IN 10W, 30W, 50W AND 100W

Wirelessly control all lights in this series with an ORA remote or through the ORA app for iOS and Android.

Each light contains a built-in signal repeater that relays commands it receives up to 100' away, making it possible to cover tremendous distances with no additional equipment.

ORA FLOOD LIGHTS

WI-FI LIGHTING

Full control of brightness, color, even color temperature is within your grasp.

From your couch or the other side of the earth.

ADAPTABILITY

Old fixtures are no longer a barrier to efficient contemporary lighting. There's an LED bulb for almost any socket, with options for any socket type.

VARIETY

Set the scene with strip lights, lamps, floodlights or downlights all fully under your control. Add timers or programs for even more options when you want to change things up.

TOTAL CONTROL

Control lights from within your home with any of several remote choices, or from anywhere in the world via custom smartphone apps and a Wi-Fi bridge.

ENDURANCE

All our fixtures undergo repeated design improvements and are put through extensive testing to ensure they offer consistent and reliable performance for years to come.

ORA™ CONTROLLERS

Use either a handheld remote or wall-mounted interfaces to control an unlimited number of compatible bulbs, floods and fixtures in four or eight zones (groups) within 100ft radius.

Each strip controller also wirelessly repeats its control signal to other wireless receivers within 100ft radius.

Set color and brightness or establish simple static or dynamic programs.

Each remote requires 2 AAA batteries.

Not included.

4 ZONE
WALL-MOUNT
RF REMOTE

Unlike traditional wall-mounted controls, these remotes send instructions wirelessly via a 2.4GHz Radio Frequency signal.

Powered by 2 AAA batteries, there is no wiring required for installation. Repositioning is simple and quick.

High-precision integrated circuits are protected by an anti-scratch hard and clear stalinite glass surface.

Tested for Safety

In 1896 Thomas Edison started testing lightbulbs for safety in a facility that was later named **Electrical Testing Laboratories (ETL)**. Today it performs safety testing for a wide range of electronics components and products.

ETL is currently a division of Intertek Testing Laboratories, an OSHA recognized Nationally Recognized Testing Laboratory (NRTL).

ETL Listed products have been tested at an ETL laboratory and found to meet all applicable Standards for Safety published by relevant NRTLs. The ETL Mark is proof of product compliance to North American safety standards. It is a symbol of safety.

Underwriters Laboratories (UL) is another OSHA recognized NRTL. UL sets and updates safety standards standards that certain types of products and processes should maintain.

A UL Listed product has been tested by UL and found to meet all relevant UL-published Standards for Safety.

Tested for Savings

When they first hit the market, poor-quality CFL bulbs led many consumers to believe that energy efficiency meant lousy product performance.

When LED bulbs were introduced, a range of performance-related **ENERGY STAR** requirements (to address light quality, flicker, bulb longevity, light distribution, etc.) ensured that they delivered on both energy efficiency and performance, and could earn the trust of millions of consumers.

Products that earn the ENERGY STAR label are independently certified to meet strict standards for energy efficiency set by the EPA, without compromising performance. ENERGY STAR products deliver real consumer savings.

The **DesignLights Consortium (DLC)** is a non-profit organization that promotes high-quality, energy-efficient lighting products, in part by establishing product quality specifications.

A product included on the DLC Qualified Products List (QPL) has been verified to perform with high levels of energy efficiency.

NUR Manufacturing is a global operation, sourcing parts from China, Japan, Korea, and the United States. Its main production facilities are located in mainland China, with custom assembly operations in the United States.

NUR's primary customer focus is North America, with exclusive distribution through **LED City** in Dallas, Texas.

NUR maintains the highest production and quality control standards, performing extreme and rigorous testing to ensure that all products that carry its name are safe and reliable, and provide the best quality light for any application.

As its thousands of loyal clients will attest, **NUR** products are **built to last**.

ABOUT US

*We are thrilled to be a leader in the growing LED industry.
Our 10,000 sq ft showroom has become a must-see destination for the public
and a key resource where professionals can meet with their customers
to explore the most cutting edge lighting technology available.*

We look forward to partnering with you on your next LED project!
